Subject: Mid Valley Pipeline Spill Update
Date: Monday, November 03, 2014 8:17:51 AM

Although cleanup activities are continuing at the site, recoverable oil operations have come to a close. Sunoco is transitioning into a monitoring and maintenance mode. Among other things this means keeping sorbent boom and silt fencing deployed for rain events and checking them periodically. EPA will remain at the site till mid-week and then demobe assets back to Dallas with the understanding that spot checks will continue during the monitoring/maintenance phase. LOSCO and LDEQ will continue to maintain direct oversight during this phase. Thx.
